

HEALING SCHEDULES

LIPS

Typical Effects

- Day 1 Swelling, tender heavy thick lipstick look with a reddish brick color effect.
- Day 2 Slight swelling, reddish and tender with a slight metallic flavor.
- Day 3 Less swelling, thicker texture, sore, hot feeling before exfoliation with an orange color effect.
- Day 4 Exfoliation begins, very chapped lips.
- Day 5 Very chapped but almost finished with first chapping stage.
- Day 6 A soft, rich color begins to appear.
- Day 7-13 Lip color disappears and the “frosty” (second chapping) stage begins as a whitish/grayish haze on the lips.
- Day 14 Color “blooms” from within more and more each day until day 21 (three weeks post procedure).
- Day 21 Healing complete; the color you see is the color you have. Your lips will remain very dry for a month or two, use a good lip balm and they will return to normal, but with great color.

EYELINER

Typical Effects

- Day 1 Swollen, like you’ve been crying, with a heavier eye makeup look.
- Day 2 Swollen, usually for only a few hours after waking up, with the heavier eye makeup ooh continuing.
- Day 3 Swelling decreases with a tight feeling. The pigment begins to lift away from the skin.
- Day 4 There is a “pinching” feeling. Some itching is normal as the skin begins to flake. **DO NOT PICK AT IT.**
- Day 5 Blinking movement of the eye usually removes all pigment by this day.
Color is somewhat grayish and will take a few more days to clarify to full color.

EYEBROWS

Typical Effects

- Day 1-2 The eyebrows are approximately 20 to 40% darker and bolder in with than they will be healed.
Your skin is red under the pigment which causes the color of the pigment look darker. There is some swelling, although difficult to actually see due to the thickness of the skin in the eyebrow area. This will subside.
Exfoliation, which begins in a few days, will cause the excess pigment surrounding the eyebrow procedure to flake away and a more narrow appearance will result. New skin will heal over the pigmented area and result in a softer appearance of your eyebrow. Don’t be concerned that your eyebrows initially appear darker and heavier in size than you desire. This is all part of the process.
- Day 3 Eyebrows start to itch and will appear a bit thicker in texture. Exfoliation begins.
- Day 4 The skin begins to flake -- peeling from the outside edges first.
- Day 5 Color finishes flaking off and appears softer and grayer for a few days until color clarifies.

NOTE:

Permanent makeup procedures are effected by the canvas ((you skin) that they are performed on. If your skin is sun damaged (even from tanning beds, thick and uneven in texture. or excessively dry or oily the result cannot be expected to be perfect after the initial procedure. Scars on the lips from fever blisters cause pigment removal. Lifestyle, medications, smoking, metabolism, facial surgery and age of skin all contribute to fading. Touch-ups are needed 30 days after your initial procedure to ensure the best result and to keep your permanent cosmetics looking the best. Your procedure maintenance, as outlined in your pre/post procedure directions, is very important.
